POLYMERIZATION OF CHLOROPRENE. [Nov 58]
[9]p.

Order from LC or SLA mi\$1.80, pb\$1.80 60-18997

Trans. of Belgian patent 564218, by Farbenfabriken
Bayer Aktiengesellschaft, Leverkusen, Germany
(International convention; appl. of German Federal
Rep. no. F 22 222, IVh/39c, filed 25 Jan 57).

The chloroprene is polymerized in the presence of
0.005 to 2% (based on the chloroprene) of a polymeri-
zation catalyst chosen from the group consisting of
nitrogen sulfides, heptathio-imide and their deriva-
tives. The chloroprene is polymerized in aqueous
dispersion at a pH of 7 to 12 and a temperature of
about 40 to 110°C, until about 60 to 90% of the chloro-
prene has been polymerized, after which the poly-
merized chloroprene is isolated.
